How a lot of patients react when they are told they have diabetes

and later, how they worry about the potential complications

Do you ever feel your advice isn't being heard?

Every day in the UK, another 300 people are told they have developed a diabetic foot ulcer. For every one of them there is now no permanent cure, only remission. 44% of patients who present with an ulcer will not survive 5 years.

As a clinician, what can YOU do to reduce these numbers?

Advice and warnings alone don't seem to be working very well, but recommending Liqua Care Diabetic Flowgel Orthotics on prescription for your "at risk" patients certainly will.

Clinically proven to dramatically counter the two main causes of developing a foot ulcer

Clinically Effective. Cost Effective. Unique.

It's simple to request a prescription – see how on www.liquacare.co.uk or call 0870 041 0150

Liqua Care Flowgel Orthotics are available on all UK Drug Tariffs, FP10/GP10

LIQUA CARE®
Diabetic FlowGel Orthotics™

CLINICALLY PROVEN

Prevents the main causes of diabetic foot ulcers by:

- Substantially reducing peak forefoot pressures
- Significantly increasing circulation in the feet/lower legs
- Can also reduce the symptoms of diabetic neuropathy.

CLASS 1 MEDICAL DEVICE

Pressure map of foot without Liqua Care Flowgel Orthotics | Pressure map of same foot with Liqua Care Flowgel Orthotics

- Reduces pressure as you stand and walk (offloading)
- Proven increased blood flow within lower legs & feet (venous return)
- Improves the way you walk & stand (gait cycle)
