

**Diabetic foot ulcers greatly affect quality of life and life expectancy.
On any day of the week the number of people in the UK with an active
foot ulcer would fill the O2 arena four times over...**

**...and if it was full, every year the number who die prematurely
due to foot ulcer complications would empty it again - twice over.**

Until now there was no active treatment to help avoid
the main problems that contribute to the development of
a diabetic foot ulcer.

That's just changed.

Clinically proven to reduce
peak pressures and increase tissue perfusion,
**Liqua Care Diabetic Orthotics are
now available on NHS prescription (FP10/GP10).**

**LIQUA
CARE®**
Diabetic FlowGel Orthotics™

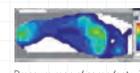

CLINICALLY PROVEN

**Prevents the main causes of
diabetic foot ulcers by:**

Substantially reducing peak forefoot pressures
Significantly increasing circulation in the feet/lower legs
Can also reduce the symptoms of diabetic neuropathy.

Pressure map of foot without
Liqua Care Flowgel Orthotics

Pressure map of same foot with
Liqua Care Flowgel Orthotics
